

HEY THERE!

Would you and your child like to participate in research?

WHO YOU ARE...

We are seeking parents of 3–5 year olds with Autism Spectrum Disorder (ASD) to consent for their child to be involved in this study. It will be conducted by [REDACTED] for a student research project at [REDACTED], supervised by [REDACTED]. Ethics approval has been obtained for this research: [REDACTED] no: [REDACTED]

WHAT'S THIS RESEARCH ABOUT?

This study explores how children with ASD interact with and learn new words from robots in comparison to typically developing children. Robots have been found to have great benefits for children with ASD and are emerging within schools and education facilities. We don't know if the benefits of robots translate to learning new words yet in children with ASD, so is important for us to consider.

WHAT WILL MY LITTLE SCIENTIST DO?

Your child will be asked to watch a 30-second video of a child playing with a social robot, and then play with, read a book together, and answer some questions about the book with the social robot, called NAO. These activities will take approximately 10 minutes altogether and occur at AEIOU during their program time. You will also receive a consent form to complete for your child.

IF YOU WOULD LIKE TO PARTICIPATE

If you are interested in your child participating in this study, please complete the following consent form. You will receive further details surrounding privacy, confidentiality and experimental procedures prior to consenting for your child to participate. If you have any questions, please email me at [REDACTED] or [REDACTED] at [REDACTED]

Thank you for supporting our research!
