

Learning Task on iPad Air

19/07/2022

Purpose:

Test [REDACTED]'s Learning Task on an iPad air to check the capability and the performance of the Web APP on the NAO 6 robot.

Procedure:

1. Turn on mobile phone's hotspot.
2. Connect the iPad and NAO 6 to the Hotspot wireless network. (iPad passcode: [REDACTED])
3. Check the NAO robot's IP address (e.g.: [REDACTED])
4. Open the Safari the web browser on the iPad.
5. On Safari, type in the Learning Task's web address: [REDACTED]/LearningTask/test.html
6. The first page shows as follows:

7. NAO says: "This show is called Show and Tell." And then NAO automatically goes through the Storybook scripts as [REDACTED] required till the last page. The book's pictures are follows NAO's speech simultaneously , some examples are as follows:

3:58 pm Mon 18 Jul 100%

NAO LEARNING TASK

Sam asks, "Can I please take my POK?"

8. At the End story page, NAO says: “The END”, wait for 5 seconds, NAO says: “Great listening”, and then wait ...
9. When clicking “THE END” picture, NAO says:” Okay, now let’s play a game. I’m going to show you some more pictures and ask you some questions. So please pay attention to the screen. Are you ready? Great! Let’s start.” At the end of the speech, the first trial of the Picture Choice Task shows on the iPad screen as follows:

NAO says: “Look! Which one is the apple?” and then wait for response (touch APPLE or BANANA) . After the response receives, NAO says: “Great, let's do another one.” Then move to next trial, and so on.

Conclusion:

With the web technology and NAO's Javascript SDK, the Learning task can be implemented on the tablet such as iPad with Web Browser such as Safari, Google Chrome, etc.

The web APP needs end-user software tests and some minor adjustments for the aesthetics purpose. If the response data is needed, the data saving function needs to be developed.
